

RoadSoS_AI

AI That Responds Before You Can Even Ask.

An AI-powered real-time emergency response system that detects road accidents automatically, triggers SOS with live location, and delivers life-saving guidance — turning the golden hour into a golden minute.

< 60

SECONDS TARGET
RESPONSE TIME

THE PROBLEM

The Harsh Reality on Indian Roads

1.5 Lakh+

Lives lost on Indian roads every
single year

3.5 Min

A life is lost on Indian roads
every 3.5 minutes

6+ Min

Average time emergency help
takes to arrive

50%

Of these deaths are preventable
with timely medical help

Behind every statistic is a family that needed help to arrive faster.

Why Current Systems Fail

Victim is often unconscious

Can't call for help or unlock the phone

No medical context for bystanders

Blood group & allergies unknown to responders

Manual SOS needs a conscious user

Needs a button press a victim can't make

No automatic crash detection

Apps report after impact, not during

Vague or missing location data

Location reaches responders late or wrong

Poor connectivity on highways

Breaks online-only tools in blackspots

THE SOLUTION

Introducing RoadSoS_AI

An AI-powered guardian that detects, alerts, and guides — instantly and automatically, even when you can't.

WORKS EVEN WHEN THE VICTIM IS UNCONSCIOUS

Mission: < 60 sec

Cuts emergency response from 6+ minutes to under 60 seconds

Runs in the background

Fully active even when the app is closed

Works fully offline

No dependency on constant internet connectivity

HOW IT WORKS

The Emergency Response Flow

FAIL-SAFE BY DESIGN

The 3-Layer Protection System

Three independent ways to trigger help — so there is never just one point of failure.

LAYER 1

Automatic Crash Detection

Sensor-fusion detects impact and triggers SOS on its own — works even if the victim is unconscious.

LAYER 2

Voice-Activated SOS

A spoken trigger phrase activates emergency mode instantly — completely hands-free.

LAYER 3

Shake Gesture SOS

A manual panic trigger — shake the phone to raise an alert in seconds.

Three ways to trigger help. Zero ways to be left behind.

WHAT IT DOES

Core Features

Automatic Crash Detection

Sensors identify real accidents instantly

Live GPS Tracking & Sharing

Location shared with contacts & responders

SMS + WhatsApp + Call Alerts

Multi-channel alerts always get through

Medical Profile Sharing

Blood group & allergies sent to responders

AI First-Aid Guidance

Context-aware guidance for bystanders

Offline & Background Ready

Protects you even offline, app closed

Technical Architecture

Alignment with Road Safety Track Challenges

Accident Prediction

Sensor patterns flag risky motion signatures and build a dataset for future risk scoring.

LIVE

Driver Assistance

Voice SOS, shake triggers & AI guidance assist drivers before, during, and after an incident.

LIVE

Traffic Flow Optimization

Every alert carries live location data — the foundation for emergency-vehicle routing integration.

ROADMAP-READY

IMPACT & VISION

The Impact We're Targeting

BEFORE

6+ minutes

average emergency response time, with manual reporting and delayed medical context

WITH ROADSOS_AI

< 60 seconds

automatic detection, instant multi-channel alerts, and live medical context from second one

40–60%

Faster emergency
response target

1000s

Of lives with the
potential to be saved yearly

100%

Offline-capable,
background-ready design

Vision: every vehicle, every phone — a life-saving node on the road.

THE TEAM

Team RoadSoS_AI

The builders behind the mission to make every road safer.
